**June 3<sup>rd</sup>, 2024, Aula Pacinotti, 14:30-18:30**

Harvesting the wind energy is the complex art of turning the chaotic atmospheric flow into usable mechanical power. The US Department of Energy is conducting unprecedentedly ambitious experimental field campaigns to understand how atmospheric physics impacts wind energy. And *vice versa*. Join us to learn more about cutting-edge technologies and novel techniques to measure wind and wakes.

This work was authored in part by the National Renewable Energy Laboratory, operated by Alliance for Sustainable Energy, LLC, for the U.S. Department of Energy (DOE) under Contract No. DE-AC36-08GO28308. Additional work was performed under the auspices of the U.S. Department of Energy by Lawrence Livermore National Laboratory under Contract DE-AC52-07NA27344 and Pacific Northwest National Laboratory.
